

FACT SHEET | Process Pipeline Analysis

HOW CAN I EXAMINE AND IMPROVE PROCESS QUALITY SYSTEMATICALLY AND SUSTAINABLY?

UPDATED: MARCH 2010

The Process Pipeline Analysis offers a dynamic way to appraise the flow of business process transactions in an SAP system. It structures, evaluates and visualizes the document- and dataflow separately for diverse process variants (pipelines). Business process transactions are assessed and screened for exceptions.

What are the criteria for an outstanding business process? How can excellent process organization be stabilized while less effective organization is spotted and optimized?

This form of RBE analysis enables ongoing, systematic, targeted examination and improvement of processes.

We recommend you conduct an exhaustive analysis of your process quality at business process transaction level each quarter. Critical exceptions needing to be eliminated from day-to-day business should be tracked at once in the SAP Business Warehouse with the help of the PPA Info-Cube.

WHAT SERVICES ARE INCLUDED?

Comprehensive Analysis of Your Processes

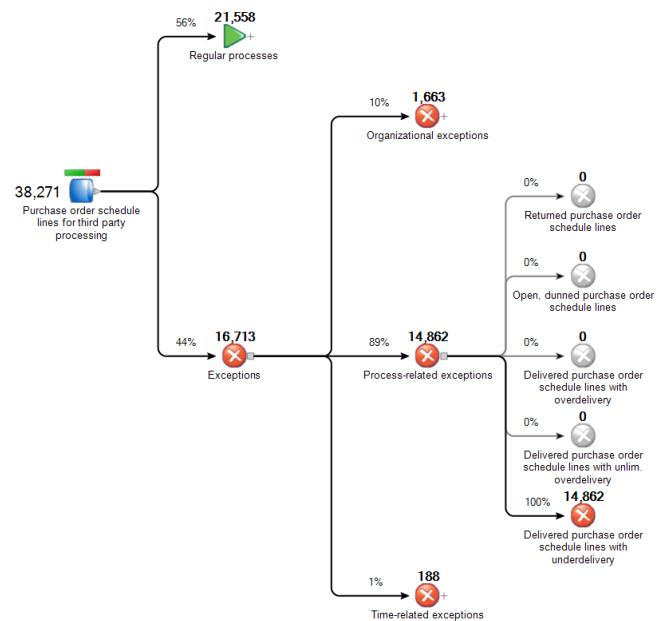

The basis for this examination is an analysis and measurement model containing over 7,000 indicators.

Identification of Exceptions

The analysis model recognizes more than 1,800 patterns for pinpointing anomalies in process flow.

Business Analysis Content

The Process Pipeline Analysis includes business transactions from these main processes:

Visualization of Pipeline Exceptions

Main Operational Processes

- Plan
- Procure
- Move
- Deliver
- Pay
- Source
- Make
- Sell
- Return

Main Management Process

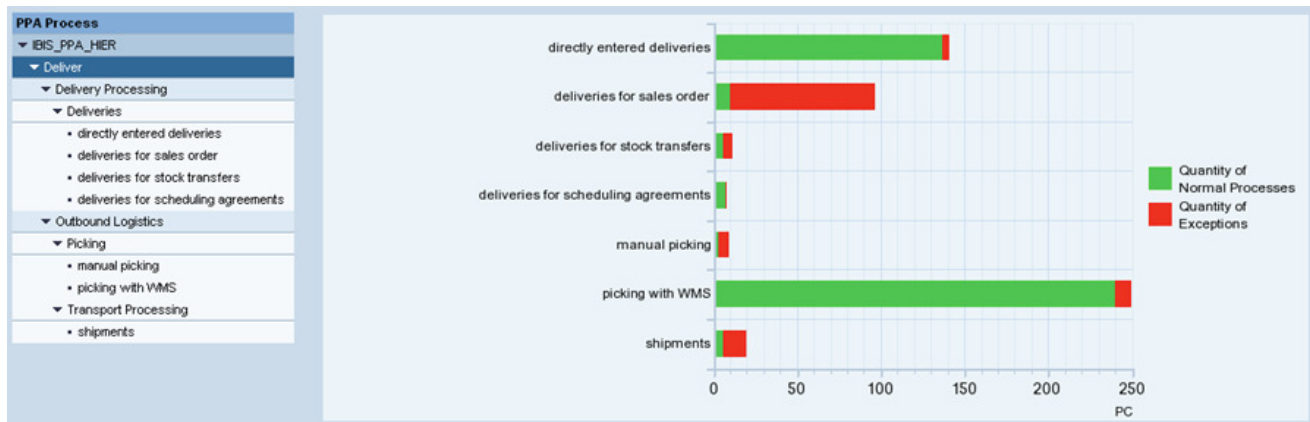

- Accounting

Additional management processes can be provided on demand.

HOW DO I BENEFIT?

Differentiated Analysis of the Process Flow

An array of visualization and assessment techniques quantify and document the truly existing process flow. The Process Pipeline Analysis scrutinizes business process transactions and helps you get to the core of process disruptions.

Exceptions Tracking – Same Content based on SAP Business Warehouse (SAP BW)

Assessing Process Quality

Thanks to its coherent, systematic gauging of indicators across all application areas, the predefined, model-based analysis is able to evaluate process scenarios actually used.

Identifying and Tracking Exceptions in Process Flow

The Process Pipeline Analysis accurately detects, quantifies and visualizes organizational, temporal and process-related anomalies, such as special processing exceptions or obstructions in the process flow. Exceptions discovered can be tracked and analyzed even at document and configuration level.

Supporting More Efficient Processes in the Long Term

The Process Pipeline Analysis gives you clues about which processes can be improved and points out which ones are “good to go”. Indicators may include critical trends in usage behavior, a disproportionate ratio of exceptions or a large number of manual changes.

WHAT’S THE OUTCOME?

The Process Pipeline Analysis includes:

- Browser-based preparation of analysis results,
- An analysis model analyzed and documented specially for you,
- Approx. 500 visual interpretations of analysis results (depending on analysis scope),
- “Top” lists, key figures and sample document numbers,

- A detailed portrayal of quantified results, including clustering by organizations and customization settings,
- An extensive workshop on customer premises, including a results presentation.

WHAT ARE MY OPTIONS?

You can deploy the Process Pipeline Analysis as a **service** or a **solution**. It lets you stipulate the analysis scope by offering 10 pre-defined main processes to choose from. And, depending on your particular requirements, you can promptly affect a series of structure adjustments and/or additions and differentiations to the evaluation.

Process Pipeline Analysis subject matter is also available as certified **Business Content** for the **SAP Business Warehouse**:

- The analysis model and data can be imported to the SAP Business Warehouse as Business Content.
